## Abstracts

[Félix Cheysson](#) (Sorbonne University, Paris)  
*Inference of Hawkes processes from imperfect data*

[Imma Curato](#) (TU, Chemnitz, Germany)  
*Mixed moving average field guided learning*

[Herold Dehling](#) (Bochum University, Germany)  
*Test for independence of long-range dependent time series using distance covariance*

[Konstantinos Fokianos](#) (Cyprus University)  
*Nonlinear Network autoregression*

[Guillaume Franchi](#) (ENSAI-CREST, Rennes)  
*Dynamic modelling of abundance data*

[Adam Jakubowski](#) (Nicolaus Copernicus University, Torun, Poland)  
*Phantom distribution for non-stationary time series as an averaging operation*

[Oleg Klesov](#) (Kyiv Polytechnic Institute, Ukraine)  
*Rate of convergence in the strong law of large numbers for records*

[José R Leon](#) (UdelaR, Montevideo, Uruguay)  
*Some ideas about modeling real situations using hypoelliptic SDE equations with or without boundary conditions*

[Alexander Lindner](#) (University of Ulm, Germany)  
*Quasi-infinitely divisible distributions*

[Sana Louhichi](#) (Université Grenoble Alpes, France)  
*On bandwidth selection problems in nonparametric trend estimation under martingale difference errors*

[Thomas Mikosch](#) (University of Copenhagen, Denmark)  
*Self-normalized sums of heavy-tailed random vectors*

**Michael Neumann** (University Jena, Germany)

A log-linear model for non-stationary time series of counts

**Vytaute Pilipauskaite** (Aalborg University, Denmark)

*Nonparametric estimation of McKean-Vlasov SDEs via deconvolution*

**Mathieu Rosenbaum** (Polytechnique, Palaiseau, France)

*The two square root laws of market impact: rough volatility and the role of sophisticated market participants*

**Gennady Samorodnitsky** (Cornell, Ithaca, USA)

*Clustering in large deviations*

**Donatas Surgailis** (University of Vilnius)

*Fractionally integrated spatial models and statistical applications*

**Nizar Touzi** (NYU, New-York, USA)

*HJB equations on the process space, application to mean field control with common noise*

**Lionel Truquet** (ENSAI-CREST, Rennes)

*Stability Properties of Certain Markov Chain Models in Random Environments*

**Alexandre Tsybakov** (CREST, ENSAE, Institut Polytechnique de Paris)

*Gradient-free optimization from noisy data*

**Anne van Delft** (Columbia University, New-York)

*Detecting moments of significance in nonstationary time series of random geometric objects*

**Olivier Wintenberger** (Sorbonne University, Paris)

*Moment conditions for random coefficient  $AR(\infty)$  under non-negativity assumptions*

**Wei Biao Wu** (University of Chicago)

*Fast Algorithms for Estimating Covariance Matrices of Stochastic Gradient Descent Solutions*
